

In the Specification:

On page 17, please change the paragraph extending from lines 9 through 12 as follows:

--An alternative location for the coloring device (20) is trailing behind the embossing wheel (18), as shown in FIGURE 6 5. In this embodiment, the coloring substance is transferred directly onto the embossed material (26). The attachment of this alternative coloring device (20) is on the cover/handle (12) at the attachment location (16) for the embossing wheel ~~(20)~~ (18).

On page 17, please change the paragraph extending from lines 13 through 16 as follows:

--The cover handle (12) also has, as also shown in FIGURE 5, at an edge parallel to the rotational axis (30), a wide foot member (12a). The foot member (12a) functions to allow the entire roller device to be set down in a vertical position when not in use. This vertical position allows the user to easily pick up the embossing wheel and resume usage thereof.

On page 18, please change the paragraph extending from lines 5 through 7 as follows:

--The first of two attachments for the embossing wheel (18) is a cutting wheel (35) that allows the food in question (26) to be cut straight on cut with a pattern (36) while simultaneously being embossed, as best depicted in FIGURE 4 and in partial cutaway in FIGURE 8.--
